Carbon Monoxide 8/a

Order No. CH 19 701

Application Range

Standard Measuring Range: 8 to 150 ppm

Number of Strokes n: 10

Time for Measurement: approx. 2 min Standard Deviation ± 10 to 15 %

Color Change: white → pale brown

Ambient Operating Conditions

0 to 50 °C Temperature: Absolute Humidity: $< 50 \text{ mg H}_{\circ}\text{O} / \text{L}$

Reaction Principle

 $5 \text{ CO} + I_2O_5 \rightarrow I + 5 \text{ CO}_2$

Cross Sensitivity

Acetylene is also indicated, however, with less sensitivity. Petroleum hydrocarbons, benzene, halogenated hydrocarbons and hydrogen sulfide are retained in the pre-laver. In the case of higher concentrations of interfering hydrocarbons, use should be made of a carbon pre-tube (CH 24 101). Higher concentrations of easily cleavable halogenated hydrocarbons (e.g. trichloroethylene), are liable to form chromyl chloride in the pre-layer which changes the indicating layer to a yellowish-brown. CO determination is impossible in the case of high olefin concentrations.
